EDUCATION

BS in Computer Science – *Arizona State University (ASU) | Tempe, AZ* 8/2021 – 5/2025

- Magna Cum Laude, GPA: 3.62
- Academic Achievement Scholar, Dean's List (2021 – 2025)
- Relevant Coursework: OOP, Data Structures & Algorithms, Software Engineering, Software Analysis and Design, Distributed Software Development, Mobile App Development (iOS)

TECHNICAL SKILLS

Programming Languages: Java, C/C++, HTML, CSS, Kotlin, Assembly, Python, Swift, JavaScript

Platforms: Android, iOS, Linux, AWS

Tools: Visual Studio, IntelliJ, Eclipse, Android Studio, Git, Xcode, Taiga (Agile project tool)

EXPERIENCE

Android Developer – *Varsity Media Foundation | Tempe, AZ* 8/2024 – 5/2025

- Built an Android app for live high school sports streaming using Kotlin, Jetpack Compose, and REST APIs
- Collaborated with multiple teams (Web and iOS) and integrated feedback from sponsors and end users
- Followed agile development practices with version control, sprint planning, code reviews, and story tracking (Taiga.io)
- Presented the app at the ASU Capstone Showcase to faculty, peers, and industry guests

Exchange Student – *University of British Columbia (UBC) | Vancouver, Canada* 9/2022 – 12/2022

- Improved cultural awareness and communication skills
- Organized and participated in outdoor activities (backpacking, skiing, and snow camping) with other foreign students and with the Varsity Outdoor Club

PROJECTS

Aquafind – AWS Hackathon Winner

- Winner of the AWS Smart Cities Hackathon. Competed against 30+ teams in developing solutions for smart city infrastructure using AWS technologies
- Designed and built *Aquafind*, a full-stack web app that locates the nearest drinking water source (drinking fountains, vending machines, restaurants, etc.) based on the user's live GPS location
- The app sends HTTP requests through Amazon API Gateway to a Lambda function, which fetches water source locations from DynamoDB and displays them on Google Maps

Potluck App – iOS Mobile Application

- Developed an event coordination app using Swift, SwiftUI, and Firebase, enabling users to create and join potluck events with features for collaborative meal planning and event organization
- Built user authentication and real-time event management using Firebase Auth and Firestore. Integrated a recipe API to suggest meals based on users' dietary preferences
- Applied MVVM architecture for scalability and maintainability. Implemented deep linking and location-based services

Messaging Service Web Application

- Developed a RESTful service with endpoints for sending and receiving messages, using JSON for storage and message lifecycle management (read/purge)
- Built sender and receiver web pages with JavaScript and HTML to interact asynchronously with the backend service via fetch and display real-time messaging data

AWARDS & CERTIFICATIONS

- ASU & UBC Scholarships Recipient (2021 – 2025)
- Winner – AWS Smart Cities Hackathon (2021)
- Eagle Scout – Boy Scouts of America (2021)
- Scholar Athlete – California Interscholastic Federation
- Lifetime Scholar – California Scholarship Federation
- Certified Lifeguard – American Red Cross
